This bulletin includes the updates from the Early Warning and Reporting System (EWARS). It includes data since January 2018 till date, including comparison of same period during last year.

The Early Warning and Reporting System (EWARS)

Highlights

Dengue: Three cases of Dengue are reported this week, of which two are from Rupandehi and one is from Kanchanpur district.

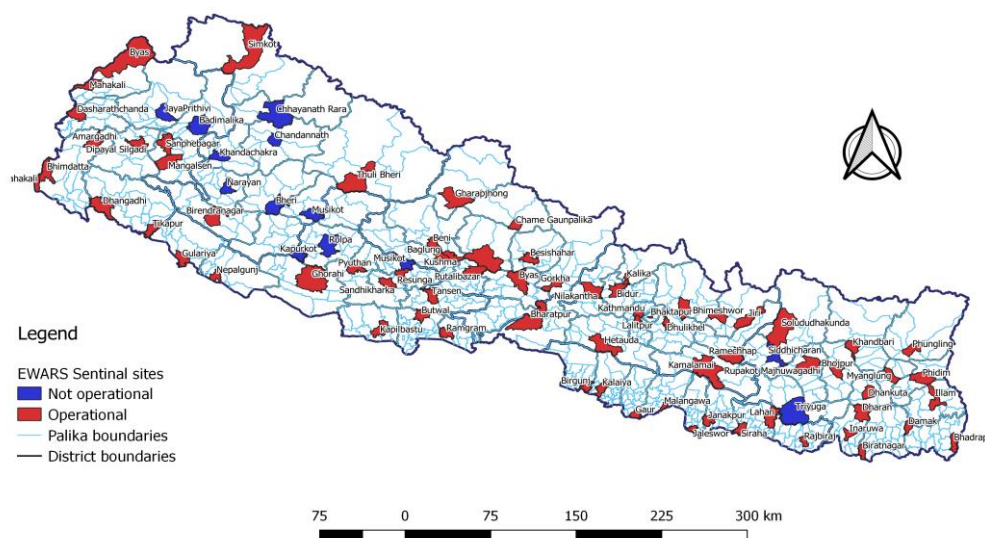

Scrub typhus: Thirty-six cases of Scrub typhus are reported this week, and the majority of cases are from Rupandehi (11 cases) and Palpa (6 cases).

SARI: Two deaths from SARI are reported this week, one from Patan Hospital, Lalitpur and the other from District Hospital, Bhojpur. The deceased were from Kavre and Bhojpur district respectively.

The EWARS was established in 1997 to strengthen the flow of information on vector-borne and other outbreak prone infectious diseases from the district to Epidemiology and Disease Control Division (EDCD) and Vector-Borne Disease Research and Training Center (VBDRTC), Hetauda. Rapid Response Teams (RRTs) can be mobilized at short notice to facilitate prompt outbreak response at Central, Regional and District level. RRTs can also support local level health institutions for investigation and outbreak control activities.

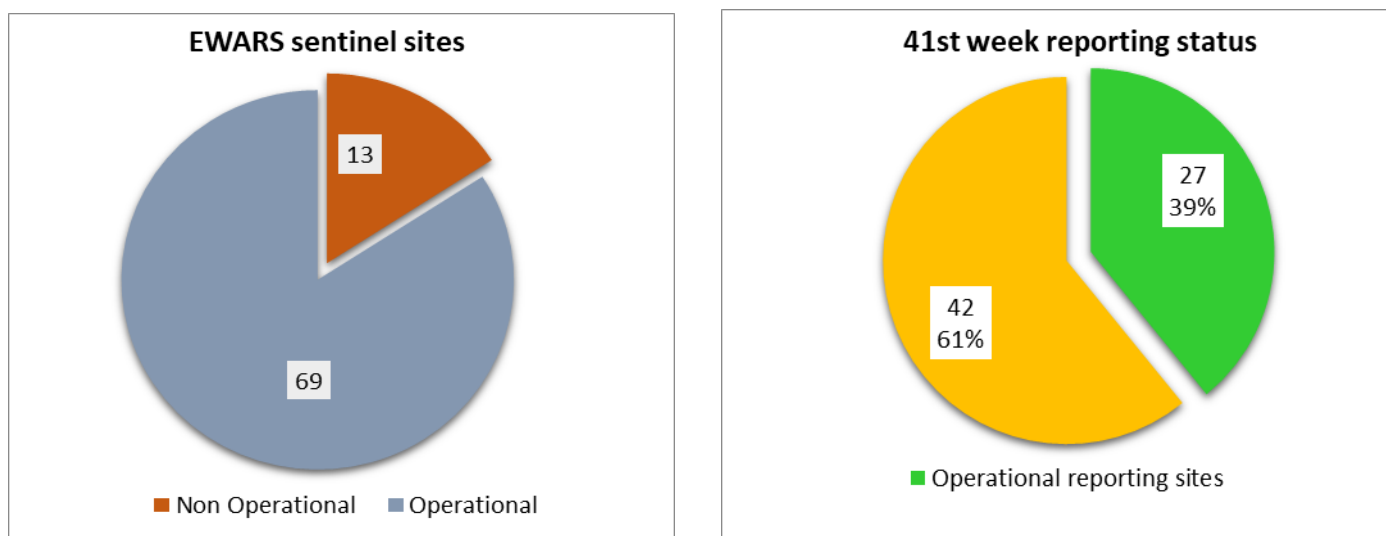

This information system is hospital-based and is currently operational in 69 hospitals (out of 82 sites) throughout Nepal (Figure 1). So far, the EWARS mainly focuses on the **weekly reporting** of number of cases and deaths (including "zero" reports) of six priority diseases/syndromes—Malaria, Kala-azar, Dengue, Acute Gastroenteritis (AGE), Cholera and Severe Acute Respiratory Infection (SARI), and other epidemic potential diseases/syndromes (like enteric fever). It equally focuses on **immediate reporting** (to be reported within 24 hours of diagnosis) of one confirmed case of Cholera, Kala-azar severe and complicated Malaria and one suspect/clinical case of Dengue as well as 5 or more cases of AGE and SARI from the same geographical locality in one-week period.

EWARS Sentinel Sites

Reporting Status

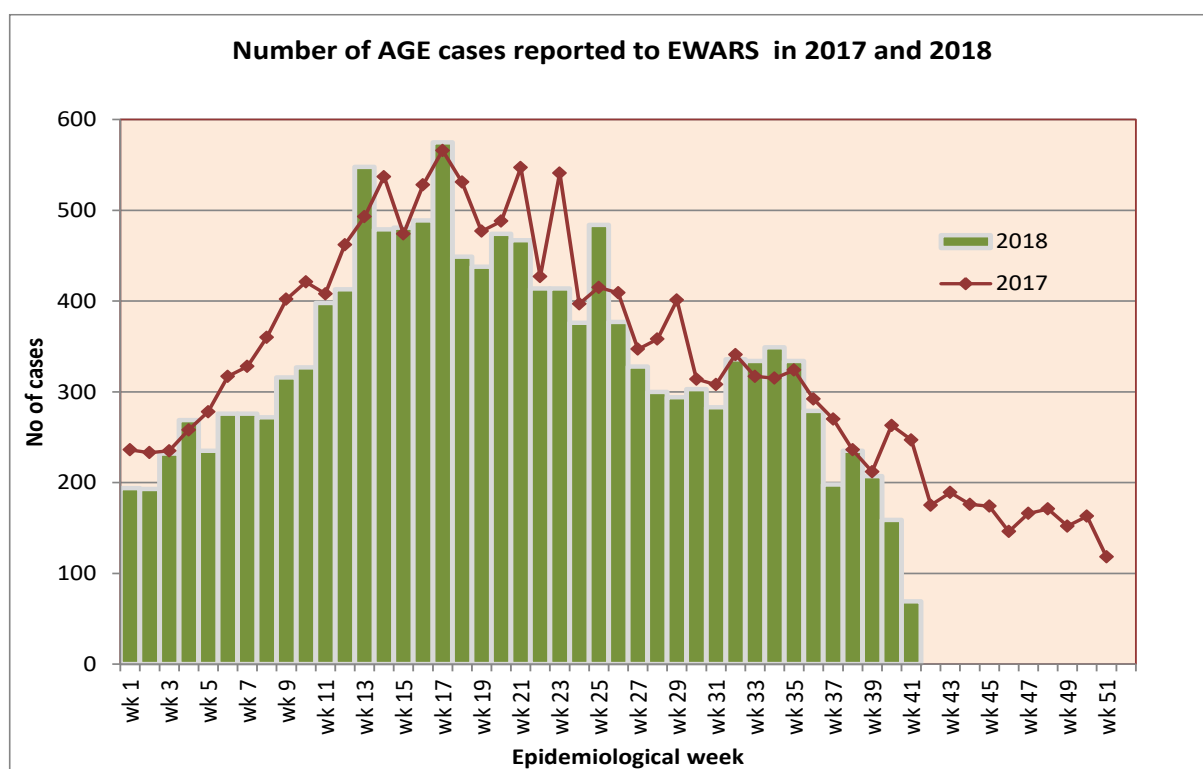

Out of 69 functional EWARS sentinel sites, report was received from 27 sentinel sites (39 percent) whereas 42 sentinel sites did not report in the 41st epidemiological week of 2018. The reporting coverage has decreased as compared to the previous week.

1.1 Acute Gastro-Enteritis and Cholera

69 cases of AGE are reported in the 41st epidemiological week of 2018. Among 69 cases, the majority of cases are from Saptari (9 cases), Rupandehi (8 cases), Kanchanpur (7 cases), and Jhapa (5 cases). The number of AGE cases reported in the 41st week this year are fewer than those reported in the same week last year (247 cases).

No death from AGE is reported this week. Fourteen deaths from AGE are reported so far this year. Twenty deaths from AGE were reported in 2017.

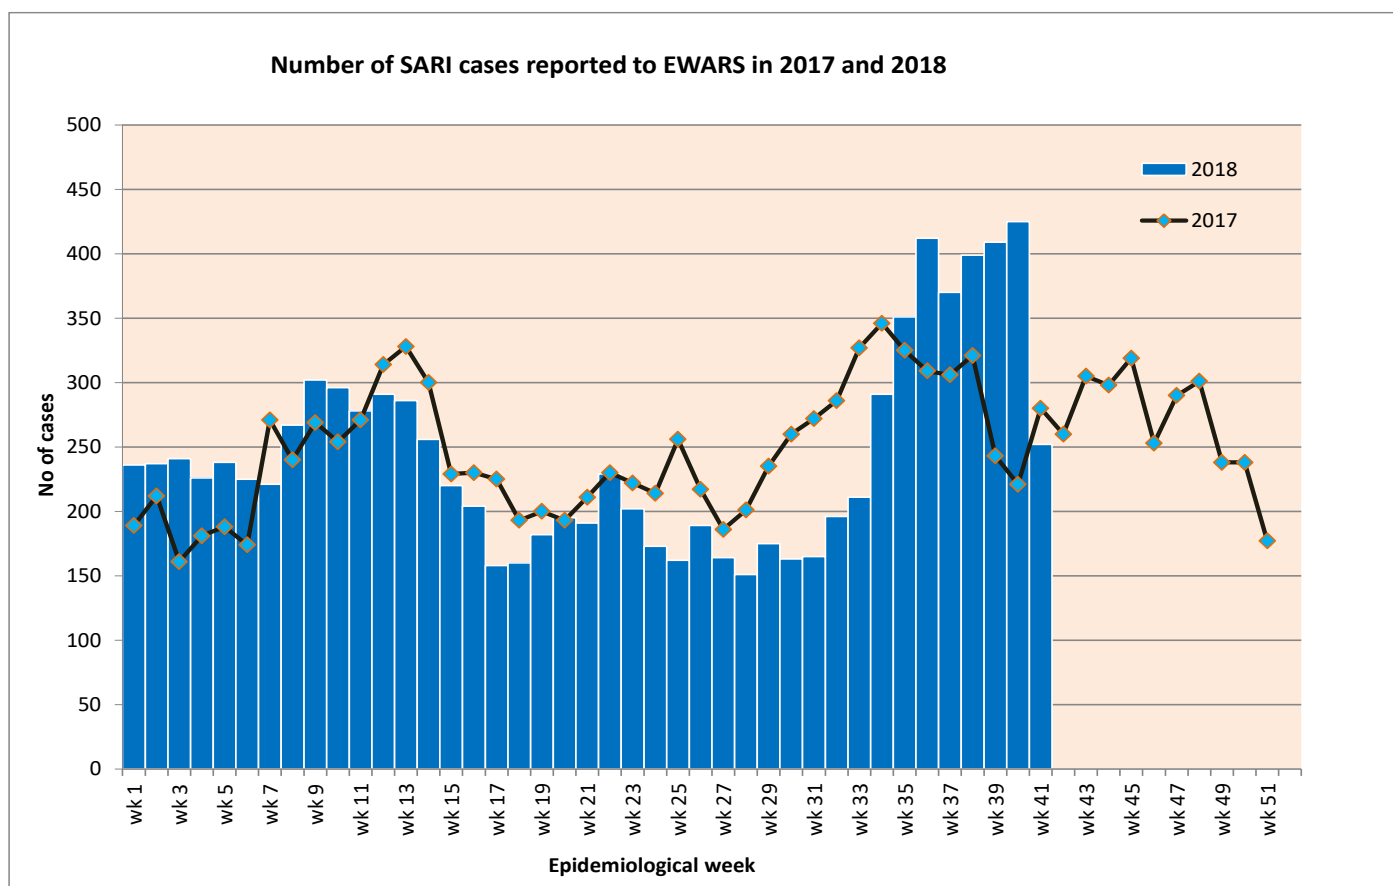

Cholera: A total of 3 cases of Cholera have been reported this year. The samples are confirmed positive by National Public Health Laboratory and the cases are from Nuwakot, Kathmandu and Lalitpur district.

1.2 Severe Acute Respiratory Infection (SARI)

252 cases of SARI are reported in the 41st epidemiological week this year. The cases of SARI reported this week are fewer compared to those from the same week last year (280 cases). Among 252 reported cases, the majority of cases are from Makwanpur (60 cases), Morang (60 cases), Lalitpur (27 cases), Palpa (15 cases), Rupandehi (13 cases), and Jhapa (12 cases).

Two deaths from SARI is reported this week, one from Patan Hospital, Lalitpur and the other from District Hospital, Bhojpur. The deceased were from Kavre and Bhojpur district respectively. Thirty-five deaths from SARI are reported so far this year. Eighty-two deaths from SARI were reported in 2017.

1.3 Enteric Fever

27 cases of Enteric fever are reported this week. The majority of the cases are from Siraha (4 cases), Palpa (4 cases), Sindhupalchowk (4 cases), and Morang (3 cases) districts. No death from Enteric fever is reported so far this year. Three deaths from Enteric fever were reported in 2017.

1.4 Malaria

One case of Malaria is reported this week from Kailali district. No case of Malaria was reported this week in 2017.

1.5 Dengue

Three cases of Dengue are reported this week, of which two are from Rupandehi and one is from Kanchanpur district. One hundred cases of Dengue including two deaths are reported so far this year. Twelve hundred and one cases of dengue were reported through EWARS in 2017. The number of dengue cases reported in the 41st week this year are less than those reported in the same week last year (62 cases).

1.6 Kala-azar

One case of Kala-azar is reported this week from Dailekh district. One hundred thirty-seven cases of Kala azar including two deaths are reported so far this year. Two hundred twelve cases of Kala-azar were reported through EWARS in 2017.

1.7 Scrub typhus

Thirty-six cases of Scrub typhus are reported this week, and the majority of cases are from Rupandehi (11 cases) and Palpa (6 cases) districts.

The number of Scrub typhus cases reported this week are more than those reported in the same week last year (23 cases). Five hundred twenty-two cases of Scrub typhus including one death are reported so far this year. Four hundred fifty-one cases of Scrub typhus were reported through EWARS in 2017.

Timeliness of reporting from sentinel sites:

Code	Sentinel Sites	Timeliness (This Week)	Site Code	Sentinel Sites	Timeliness (This Week)
101	Mechi ZH, Jhapa	On Time	136	DH, Illam	No Reporting
102	Koshi ZH, Morang	On Time	137	Dhulikhel H., Kavre	No Reporting
103	DH, Sunsari	On Time	138	DH, Solukhumbu	On Time
